**For Your Shop: BenchtopPRO Bioremediating Parts Washer**  
**BenchtopPRO, parts washer**

Posted November 1 2012 10:53 AM by [Scott Ross](#)

There aren't much dirtier jobs than washing used parts. And, until now, there hasn't been a convenient way to do it without using some ultra-solvents (that also do a number on your hands, your shop floor, and anything they touch)...or having a parts-washing service do it for you, if you can afford it. Now there's a better way, one that uses proven technology--and it doesn't take up too much room on your workbench, or in your shop.

Come on in for more about the BenchtopPRO Bioremediating Parts Washer....

Now available: The BenchtopPRO, the first and only parts washer using non-heating bioremediation. Patent-pending, The BenchtopPRO Bioremediating Parts Washer is an exciting "first" for the garage and small repair shop market. It combines the process of bioremediation with a revolutionary, non-flammable, non-toxic, degreasing solution engineered in their "dirt lab" to work at room temperature, tackling the most challenging parts washing needs – even wax-based lubricants-- in an easy-to-store, self-contained washer.

"This proven technology is already being used by thousands of industrial maintenance shops, auto repair shops and garages. The BenchtopPRO is the first and only parts cleaner designed and sized for the consumer and small repair shop market," says Tom McNally with The BenchtopPRO. "Our research shows that consumers and small shops want to use non-hazardous solvents, but they still want the industrial-strength cleaning power. We solved this problem with The BenchtopPRO, which combines our degreasing solution, bioremediation process, and unique storable design."

"The BenchtopPRO has impressive cleaning action, is a great size, is easy to store, and the cleaning is excellent," says Norman Campi, an early adopter of The BenchtopPRO. "I have cleaned a variety of greasy, oily engine parts and it cleaned them very well." He adds, "The ability to stow it on its end, with the fluid inside is brilliant. I can easily store it safely under a bench, and I don't have to worry about making sure it is out of reach of kids, pets or others."
